ACKNOWLEDGEMENTS

We have drawn heavily on the book ‘Teaching Health Care Workers’, authors Fred Abbatt and Rosemary McMahon. We gratefully acknowledge them as the source of an excellent overall system and many inspirational insights.

Dr Daksha Patel, Courses Convenor, International Centre for Eye Health, kindly reviewed this booklet.

Ann Naughton was responsible for much of the original coordination for this collection.

Human resource development is one of the three pillars of ‘VISION 2020 – The Right to Sight’. Many people involved in community eye health are also teachers – and some have never had any training on how to teach effectively. For these reasons, the Community Eye Health Journal published a series of articles on teaching and learning. A number of readers have asked for additional copies of the articles and this booklet, providing updated and additional material, is the result. As was the case with the original series, it aims to stimulate readers to become more effective teachers. It touches on a number of important topics related to teaching and learning in (we hope) a systematic and practical way. However, this can only be a beginning as education is a very broad field and readers are referred to the material in the reference section for further information.

Our understanding of what must be done to prevent blindness and promote eye health has advanced considerably in recent years. The challenge ahead is to introduce these methods to the field as quickly as possible. Training is an essential activity in the spread of new knowledge and skills to eye health workers. It can take place in a variety of ways, through initial training of field workers or as part of the continuing education of existing field staff. Training can also involve attendance at short sessions, longer training through intensive workshops, on-the-job supervised practice or distance learning through newsletters, manuals, recorded cassettes and websites.

To provide an introduction to planning, developing and implementation of effective training, the diagram below provides a summarised approach.
